On Monday 19th February, the team, led by respected professor and research scientist, Dr Alison Wood released a statement that announced this new scientific discovery. The statement explained that a team of 23 scientists has spent the last 7 years researching the potential for electricity production using organic material from plants. The team from the University of Melbourne is made up of many of the brightest minds in the world of science today and features academics from the Universities of Oxford, Berlin, Harvard and Beijing.

Car-lovers all over the world have been left devastated as a new "scientific discovery" has signalled an end to the use of Petrol and Diesel cars. In a shock move, millions of beloved cars and vans are now set to be scrapped by "tree-hugging" politicians.

## **NEW "SCIENCE" DISCOVERY SHOCKER SPELLS END FOR YOUR BELOVED CAR!!!**

## **SCIENTISTS DISCOVER PLANTS CAN BE USED TO CREATE ELECTRICITY**

World leaders have come out in support of these crazy new eco-friendly plans and have suggested that they will "set off a new clean energy revolution". I think that we can all agree that this new move to stifle the freedoms of car-enthusiasts in an attempt to stop so called "climate change" is an insult to everyone who has ever fought for our country.

To make YOUR voice heard, contribute to my 'GoFundMyCampaign' fund at [www.gofundmycampaign.biz.uk](http://www.gofundmycampaign.biz.uk) and donate money to the fight against the so-called 'Clean Air' brigade and to save our cars.

Speaking at a press conference, Dr Wood shared her excitement about what this discovery will mean for the future of our planet and the fight against climate change, "This discovery is due to the hard work and dedication of my talented team of scientists. The discovery of this process will mean that humanity can end its reliance on fossil fuels and can begin to reverse the effects of climate change."

The project, which began in August 2014, has discovered that leaves from the Red Alder tree (Alnus Rubra) can be processed in such a way which generates an electrical charge.

Car-lovers all over the world have been left devastated as a new "scientific discovery" has signalled an end to the use of Petrol and Diesel cars. In a shock move, millions of beloved cars and vans are now set to be scrapped by "tree-hugging" politicians.

There are reportedly fears from car industry insiders that this move away from petrol, diesel and other fossil fuels is the beginning of the end for good, old-fashioned petrol-heads and those that love the sound of a roaring car engine. Although no-one from the car industry has commented 'officially' on this matter, it is believed that plans are afoot to fight back against this full-on attack from eco-warriors.

"We aren't going to stand for it!" said blogger 'ManInDaVan' in his latest blog post. "No-one is taking my van off me and they can think again if they think I'm gonna put leaves in my petrol tank!".

A team of 'boffins' from an Aussie University have discovered a bizarre new way of creating electricity from dead leaves and this is set to pave the way for a wave of dramatic changes to our way of life. Commentators have already begun speculating about the devastating impact that this could have on YOU, YOUR family, YOUR possessions and YOUR livelihood.

"This new discovery may SEEM like a good thing to eco-warrior do-gooders like Greta Thunberg but, in reality, it spells disaster for many of us" said Twitter user Nigel4672 in an impassioned Tweet today.

World leaders have unanimously welcomed this announcement and have already committed to building a number of new power stations which will utilise this new technology. "We are very proud that this discovery has been made in Australia and are also grateful to the nations of the world that have shared their scientific expertise with us. This truly is a global achievement and we hope that this will now set off a clean energy revolution" said Australian Prime Minister Geoffrey Wilson this morning.

Plans are now afoot to plant millions of new Red Alder trees in preparation for this programme being rolled out around the world in the next few years.

Telling it the way we see it.
